SUMMARY

Software developer at Iraq Cell, working on a government correspondence platform in Go and Laravel. Builds full-stack applications, backend APIs and cross-platform apps with Go, PHP, TypeScript, Python, React and Flutter, including AI integrations and containerised deployments. Valedictorian of Software Engineering, University of Babylon.

EXPERIENCE

Software Developer — Iraq Cell Aug 2026 – Present
E-Book, an official-correspondence platform for a government organisation · PHP, Laravel, Go, PostgreSQL, MongoDB, Redis

- Built **ebook-auth**, a standalone Go authentication service (chi, Ent, Redis) that issues RS256 JWTs with JWKS key rotation, refresh and revocation, and migrated the Laravel API onto it as the single password authority.
- Designed and shipped **Letter Operations**: an append-only, database-enforced audit trail covering 20 letter operation types, restorable deletes, and history views scoped to each user's place in the organisational hierarchy.
- Grew auth test coverage from 3 to 26 tests with an HTTP-level fake of the auth service, so the suite runs without live dependencies in a third of the time.

Software Developer Intern — Employee Record Management System Internship
Desktop HR system · Go, React, Wails

- Built a desktop HR system with document storage, RBAC, JWT authentication and full audit logging.

SELECTED PROJECTS

ClinicManager IQ In progress
Go, Ent ORM, PostgreSQL, Flutter, SQLite, Twilio, Docker

- Offline-first, multi-tenant system replacing paper scheduling and patient records for private clinics in Iraq.
- Designed a gap-based appointment engine with conflict detection at the database level.
- Flutter app with a SQLite offline queue and delta sync, so clinics keep working through power and internet outages; sync is secured with per-device credentials that admins can revoke instantly.

AI-Driven Recruitment Orchestrator Completed
Go, Python, FastAPI, Whisper, Gemini, Docker

- Go backend orchestrating Python AI microservices for resume analysis and interview evaluation, with LLM-based candidate ranking against extracted job requirements and asynchronous resume ingestion.

AttentVis — Smart Classroom Completed
FastAPI, React, DeepFace, Computer Vision

- AI-powered classroom analytics platform that tracks attendance, gaze direction and emotional engagement in real time, designed to scale across classrooms and institutions.

MusicBox — Go API & Mobile App Completed
Go, Gorilla Mux, React Native

- Concurrent Go API for downloading and managing music from Spotify and YouTube, handling 100+ simultaneous requests with goroutine-based workers; React Native app with offline playlist caching.

TECHNICAL SKILLS

Languages	Go, PHP, TypeScript, JavaScript, Python, Java
Backend	Laravel, Node.js, FastAPI, chi, Gin, Ent ORM, Sequelize
Frontend & Mobile	React, React Native, Flutter, HTML/CSS, Tailwind
Databases	PostgreSQL, MySQL, MongoDB, SQLite, Redis
Tools & DevOps	Docker, Git, PHPUnit, Postman, Nginx, Firebase, Fly.io
Concepts	API design, microservices, JWT/JWKS auth, RBAC, audit logging, multi-tenancy, offline-first, testing

EDUCATION

B.Sc. Software Engineering — University of Babylon
Valedictorian of the department · GPA 91 / 89 / 88 / 89 2022 – 2026

CERTIFICATIONS & LANGUAGES

Azure AZ-900T00-A course (Microsoft) Jan 2026
Huawei Computer Networks V1.0 Aug 2026
Arabic native · **English** professional
