MOHAMMED BAQIR

Software Developer — Full-Stack, Backend Systems & APIs

Software developer experienced in building full-stack applications, backend APIs, and cross-platform systems using Go, JavaScript/TypeScript, Python, and React. Skilled in designing scalable backend architectures, integrating AI services, and deploying containerized applications. Currently building ClinicManager IQ — an offline-first, multi-tenant clinic management system for Iraqi healthcare providers. Seeking opportunities to contribute to modern software teams and deliver production-grade solutions.

SELECTED PROJECTS

ClinicManager IQ

IN PROGRESS

Go · Ent ORM · PostgreSQL · Flutter · SQLite · Twilio

- Building an offline-first, multi-tenant clinic management system for private clinics in Iraq — replacing paper-based scheduling and patient records with a digital platform.
- Designed a gap-based appointment engine with conflict detection at the database level.
- Architected for extensibility: time blocking, walk-in queues, WhatsApp reminders, and patient self-booking.
- Flutter app with SQLite offline queue ensures clinic operations continue during power and internet outages, in case of an outage

AI-Driven Recruitment Orchestrator

COMPLETED

Go · Python · FastAPI · Whisper · Gemini · Docker

- Designed a microservices-based recruitment platform with a Go backend orchestrating Python AI services for resume analysis and interview evaluation.
- Implemented candidate scoring and ranking based on extracted job requirements using LLM integration.
- Deployed with Docker and asynchronous processing for scalable resume ingestion.

AttentVis — Smart Classroom

COMPLETED

FastAPI · React · DeepFace · Computer Vision

- Developing an AI-powered classroom analytics platform that tracks attendance, gaze direction, and emotional engagement in real time.
- Designed modular architecture for scalability across multiple classrooms and institutions.

MusicBox — Go Backend API & Mobile App

COMPLETED

Go · Gorilla Mux · React Native · Concurrency

- Built a concurrent Go API for downloading and managing music from Spotify and YouTube.
- Implemented session management handling 100+ simultaneous requests with goroutine-based workers.
- Developed a cross-platform mobile application using React Native with offline playlist caching.

EXPERIENCE

Employee Record Management System

Internship

Desktop HR System — Go, React, Wails

- Developed a desktop HR system using Go, React, and Wails with document storage and role-based access control.
- Implemented JWT authentication and full audit logging for user activity tracking.
- Optimized database queries improving search performance across employee records.
